

Tracing wall

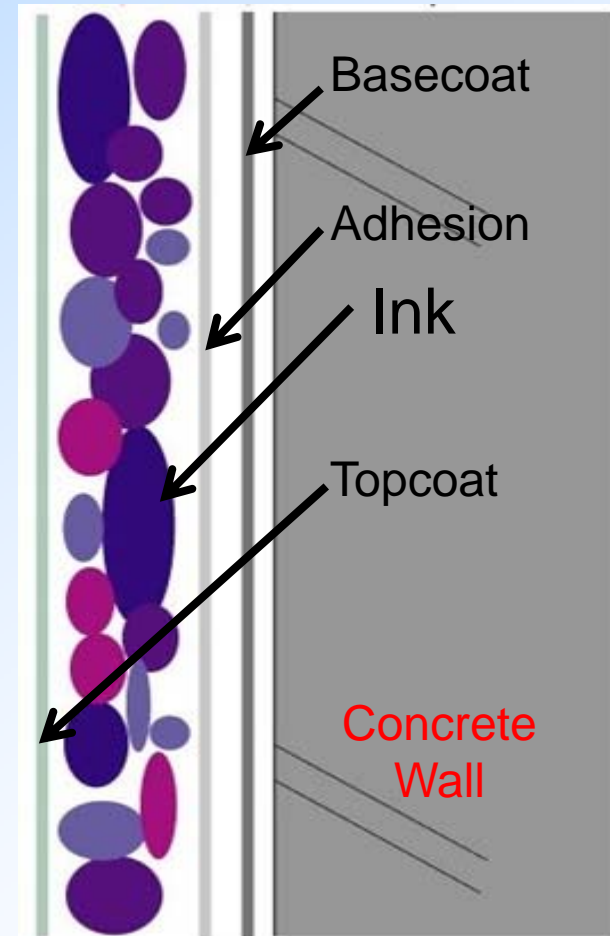

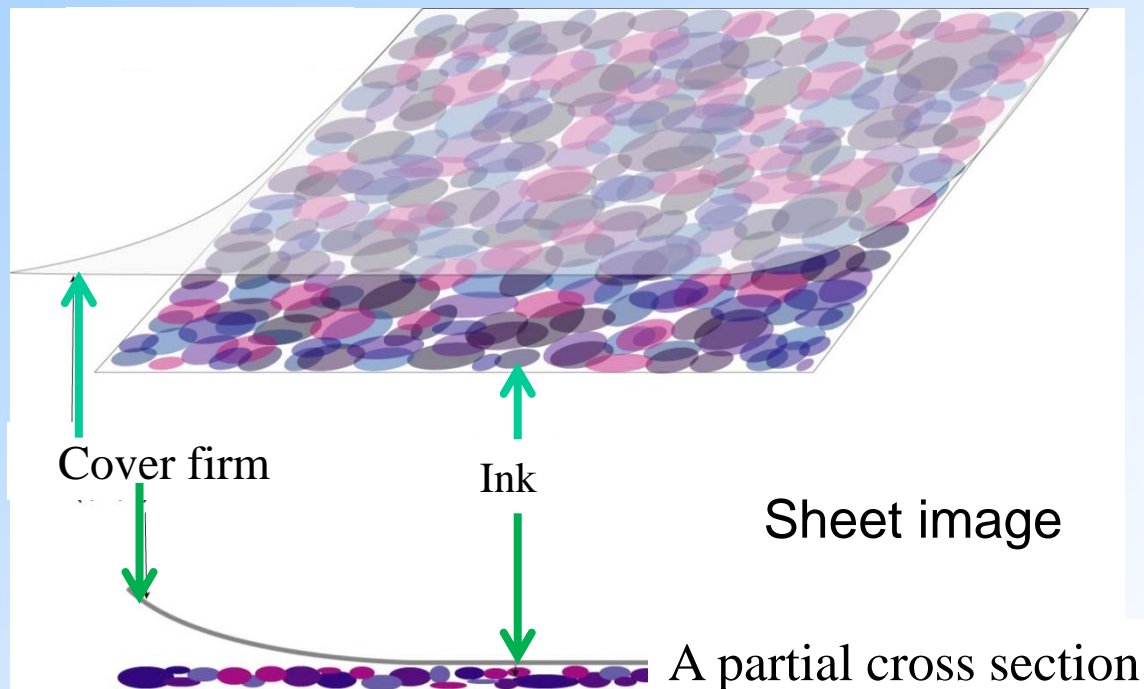

Designed transcript film technology
/ Wall of buildings

Structure of Tracing wall

Tracing wall is developed with a transcript film technology for building walls to present fine view of the buildings.

The design pattern is multi-colored based on film technology, and the surface appearance looks like a natural stone. All paint materials are aqueous.

Feature of Tracing wall

Light weight: No weight adds on the building structures, because this material is so thin and light.

No smell: No exhalation diffuses around construction area, because all paints are aqueous material.

Weather durability: We confirmed the durability of Tracing Wall, since no damage was shown over 500 hours in terms of the weather resistant test using the sun shine weather meter.

Process of construction

Base coating

Painting adhesive material

Sticking Tracing films on the wall

Press bonding

Removal of cover films (PP)

(PP: Polypropylene)

Top coating
